

ABSTRACT OF THE DISCLOSURE

An electrolyte-spraying casing is provided in an
 electroplating apparatus, which has a plurality of
 feeding rollers for feeding a sheet-shaped article. The
 5 casing includes a casing body defining a chamber, and a
 net plate disposed to confront the article. An
 electrolyte is sprayed from the chamber via meshes in the
 net plate and onto a side surface of the article. An anode
 current-conducting assembly includes a conducting net
 10 that is disposed fixedly within the chamber and that is
 superimposed on the net plate so as to cover the meshes
 in the net plate, and two conducting units respectively
 in electrical contact with two opposite side portions of
 the conducting net so as to supply electric current to
 15 the conducting net.

CERTIFICATE UNDER 37 CFR 1.10

'Express Mail' mailing label number: EL815520534US

Date of Deposit: June 7, 2001

I hereby certify that this paper or fee is being deposited with the United States Postal Service 'Express Mail Post Office To Addressee' service under 37 CFR 1.10 and is addressed to the Commissioner for Patents, Washington, D.C. 2031.
